**2** DAY

## The shipper that gives you time back!

### Designed to deliver the lowest total cost of ownership

Certis 2 Day is part of the Certis range of pre-qualified, premium shippers which are ideal for one way shipments of pharmaceutical products. All Certis products are available in refrigerated (2 to 8°C), CRT (15 to 25°C) and frozen (<-20°C) configurations and designed with ZERO Bench-Time® technology to speed up the pack-out process.

Certis 2 Day are universal shippers which use a combination of water-based and PCM refrigerants to enhance performance and eliminate the need for bench conditioning. Use the same packout for refrigerated, CRT and frozen solutions to save warehouse space, inventory costs and simplify your operation.

## One family of shippers to meet all of your one-way shipping needs

Embrace Simple® by introducing the Certis 2 Day range of shippers into your business. Choose from 4 sizes of shipper and switch between refrigerated, CRT and frozen with a simple change of refrigerant.

All of your shipping needs covered with one family of products. Let's show you how.

- It's the same pack-out across refrigerated and CRT to keep things really simple for your packing staff
- Swap out the colored bricks to switch between refrigerated and CRT, everything else stays exactly the same
- Help to reduce the risk of pack-out errors with color coded PCM bricks
- Can be used for frozen shipments too. Just retain the payload carton and fill the remaining space with Dry Ice

Couldn't be simpler and Certis is pre-qualified so you can take advantage of our performance data to get you started without delay.

### Designed to deliver the lowest total cost of ownership

- Save on assembly time and space by utilizing our ZERO Bench-Time® technology which allows our solutions to be packed out immediately
- Reduce inventory space and costs by using common components across temperature ranges
- Optimize dimensional weight and reduce freight costs across multiple temperatures and payload sizes
